The 2013 Acura ILX compact sedan is an all-new model that is positioned as the gateway into the Acura brand.

The Acura Integra was introduced in 1986 as the smaller of the two models from Honda's brand-new upscale division. It was popular through three generations until 2001, when it became the RSX (sold in coupe form only) as part of Acura's change to boring alphabetical names. The RSX disappeared after 2006, when Acura altered its marketing strategy.

However, with fuel mileage and sales concerns, a compact Acura with a new name (starting with "I") is once again on sale, slotting in under the slightly larger and more powerful TSX.
